Vision

Our vision is to become a market leader in providing comprehensive Information Technology & Communication solutions.

Mission

Our mission is to contribute to our customer's success with our highly customized, cutting Edge IT & Communication Solutions and Services that best fit their needs of quality development.

We navigate through the whole world finding out new solutions and technology partners that integrates with our engineering and solutions Development team to satisfy our customer's plans.

HOW WE WORK

We've been designing and implementing solution for small businesses, large organisations and government bodies for over a decade. And, because we keep our values intact. Here's how we do it and what you can expect from us:

STEP 1#

Our initial consultation is free! We will sit down with you and discuss what you need to fulfill your requirements and what we have to offer. During the first phase of our process, we collect information that will set the parameters for the scope of the project. This data is dependent on the type of project being initiated and includes client budget, objectives, deadline, audience, and any available market research about the end user.

STEP 2#

On receipt of a modest, we go to work. The second phase of our process is used to determine the best courses of action based on the information acquired. The initial client request is often the foundation for how we proceed, but in order to be innovative and leverage campus and client resources, we evaluate the information gathered in the previous phase and look for synergies, strategies and opportunities that we can offer to the client as a means to achieve their objectives.

STEP 3#

The third phase of our process is where the magic happens! The technical teams uses the approved project scope and strategy to develop ideas to present to the client for approval. During this phase, we work through a proofing process that ensures the clients involvement and allows their collaboration in the end product.

STEP 4#

The fourth phase begins once the final approval has been issued by the client. During this phase we work either in-house or with contracted vendors to complete the project within estimated budget and timelines. The project is monitored by Project Managers continuously to maintain the efficiency in running the project.

STEP5#

Projects Are Completed & Delivered Within Specified Time & Budgets.
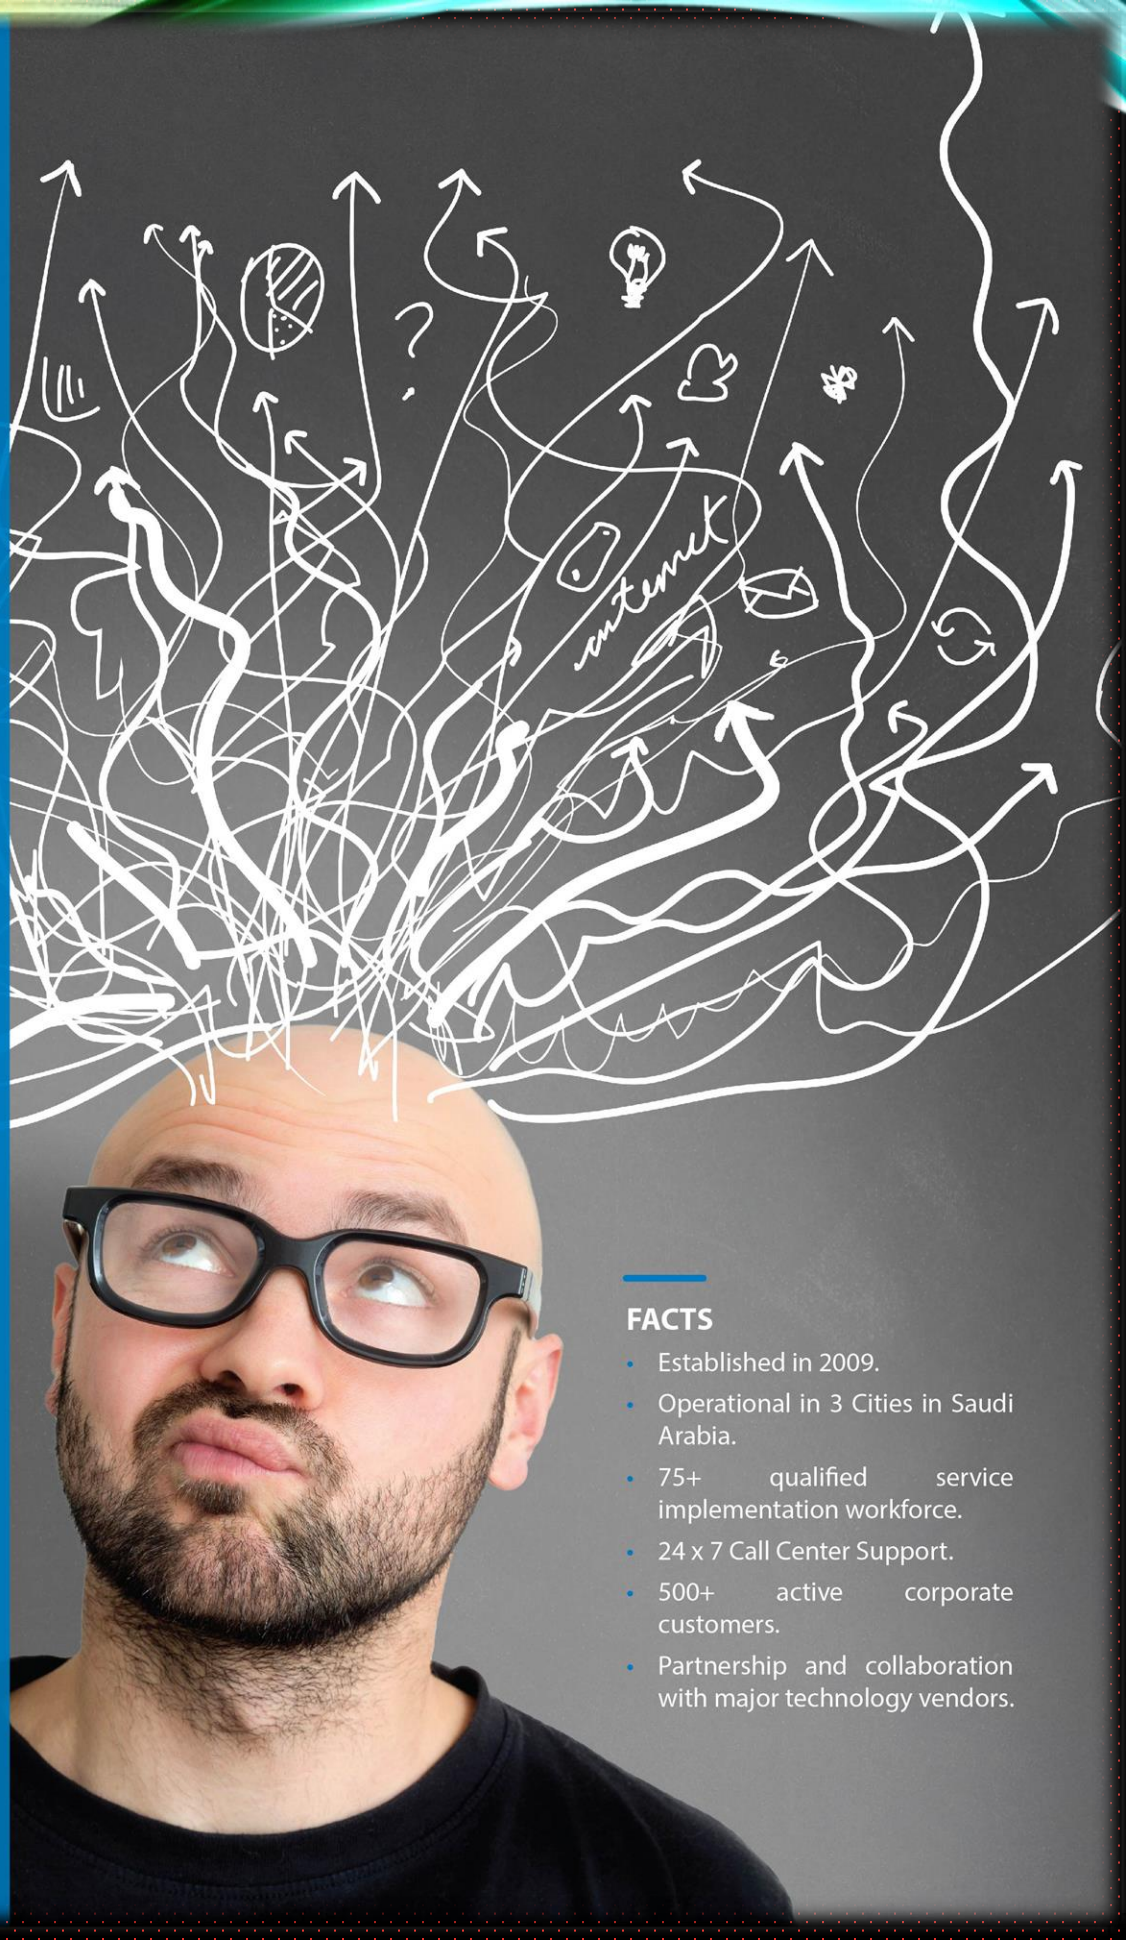

About Our Services

Designing and utilizing solution for firms, small, medium and large as well as government organizations, Cube Infotech believes in imparting of values. As a solutions integrator, we harness specialized skills and partnerships spanning across industry verticals.

Free Consultation - Obtain information about objective, budget, audience and available market research of the client.

Determine the Aptest Course of Action - Implement the data collected to look for opportunities and methods to attain objectives.

Create Ideas - Once the client approves the methodologies we suggest, we come up with ideas for client approval and expect participation till the end.

Operate - Post the final approval from the client, we begin working with either contracted or in-house teams to consummate the project within the timeline and budget.
